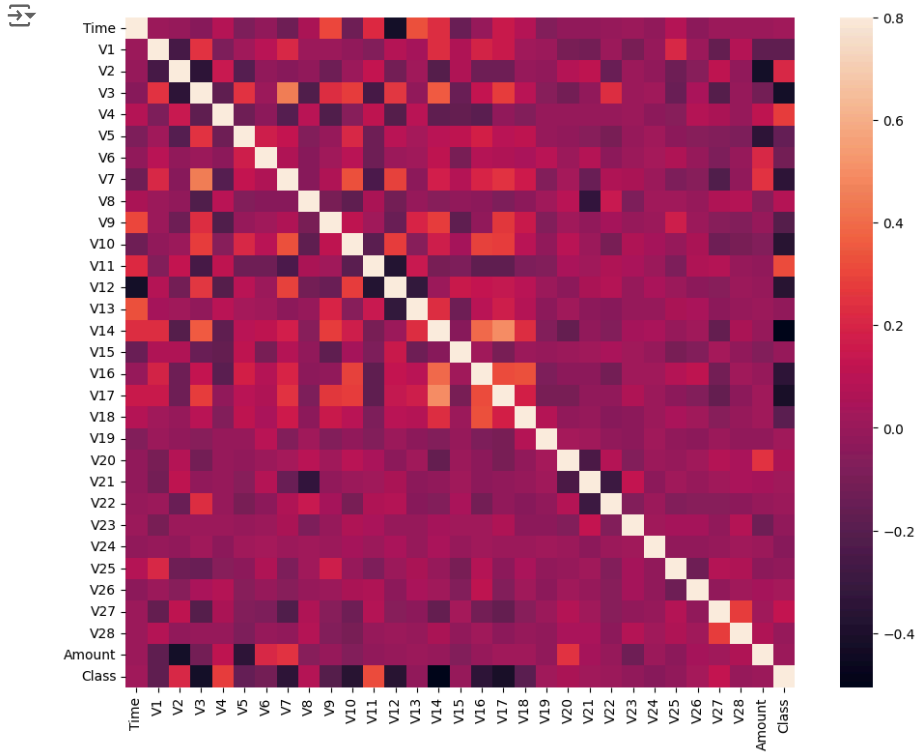
Plotting the Correlation Matrix

```
# Correlation matrix
corrmat = data.corr()
fig = plt.figure(figsize = (12, 9))
sns.heatmap(corrmat, vmax = .8, square = True)
plt.show()
```



Separating the X and the Y values

```
# dividing the X and the Y from the dataset
X = data.drop(['Class'], axis = 1)
Y = data["Class"]
print(X.shape)
print(Y.shape)
# getting just the values for the sake of processing
# (its a numpy array with no columns)
xData = X.values
yData = Y.values
```

```
(14595, 30)
(14595,)
```

Training and Testing Data Bifurcation

We will be dividing the dataset into two main groups. One for training the model and the other for Testing our trained model's performance.

```
# Using Scikit-learn to split data into training and testing sets
from sklearn.model_selection import train_test_split
# Split the data into training and testing sets
xTrain, xTest, yTrain, yTest = train_test_split(
        xData, yData, test_size = 0.2, random_state = 42)
```

Building a Random Forest Model using scikit learn

```

```

```
# Building the Random Forest Classifier (RANDOM FOREST)
from sklearn.ensemble import RandomForestClassifier
from sklearn.impute import SimpleImputer  # Import the imputer

# Create an imputer to fill missing values (e.g., with the mean)
imputer = SimpleImputer(strategy='mean')

# Fit the imputer on the training data and transform both training and testing data
xTrain = imputer.fit_transform(xTrain)
xTest = imputer.transform(xTest)

# random forest model creation
rfc = RandomForestClassifier()
rfc.fit(xTrain, yTrain)

# predictions
yPred = rfc.predict(xTest)
```

```
# Evaluating the classifier
# printing every score of the classifier
# scoring in anything
from sklearn.metrics import classification_report, accuracy_score
from sklearn.metrics import precision_score, recall_score
from sklearn.metrics import f1_score, matthews_corrcoef
from sklearn.metrics import confusion_matrix
import numpy as np # Import numpy for handling NaNs

n_outliers = len(fraud)
n_errors = (yPred != yTest).sum()
print("The model used is Random Forest classifier")
# Handle NaNs in yTest (replace with a suitable value, e.g., 0)
yTest_no_nan = np.nan_to_num(yTest, nan=0)
```

```
The model used is Random Forest classifier
```

```
